AGILE

Certified Agile Business Analyst

Successful analysis in an agile context

Developers and testers have clear and recognizable roles in agile development environment. The role of the Business Analyst is not clearly defined.

This may be because business analysis in general is misunderstood, but it is likely to be exacerbated by the lack of a generally accepted definition or framework for the agile Business Analysts - until now.

The iSQI® Certified Agile Business Analysis training provides methods and tools for the Business Analyst working in an agile environment. You get an overview of different techniques that fit well with the agile approach and philosophy. You will get specific tips based on real examples to help you promote collaboration and continuous improvement within projects. In this training you will learn these approaches by theory and practice.

After this training:

- You know the role of the Business Analyst in Agile software development projects;
- You can participate in Agile teams developing software;
- You can articulate the Business Analyst's responsibilities to both the enterprise and the Agile team;
- You understand the Business Analyst's contribution to the Agile process analysis frameworks;
- You can identify Business Analysis specific techniques that contribute to the delivery of artefacts that add value to the enterprise initiating agile projects;
- You appreciate the importance of, and how to contribute to, continuous improvement through retrospectives.

Who should attend this training?

The training is suitable for you if work as a Business Analyst or with Business Analysts and want to learn what it means to work agile. It is also suitable for everybody involved in defining and managing requirements in software development.

Roles of participants in their organization

This training is meant for:

- Product owners
- Agile champions
- Agile team leads and members of agile teams
- BA managers
- IT managers
- Business managers
- Business change managers
- Project and program managers
- Requirement engineers

Prior knowledge or training required

No specific training of knowledge required.
